ABOUT ME

I have completed my Bachelor of Computer Applications (BCA) and I am currently pursuing a Master of Computer Applications (MCA). I am a motivated student with basic knowledge of Python programming, data structures, and object-oriented concepts. I have worked on academic projects using Python and am eager to apply my skills in a professional environment. I am a quick learner, passionate about software development, and looking for an opportunity to start my career as a Python Developer.

SKILLS

- Good communication skills
- Teamwork & collaboration
- Problem-solving ability
- Time management
- Adaptability
- Quick learner
- Positive attitude
- Responsibility
- Attention to detail
- Willingness to learn

TECHNICAL SKILLS

- Python programming
- Object-Oriented Programming (OOP)
- Basic data structures
- Flutter framework
- Dart programming
- UI development (Flutter widgets)
- API integration (basic)
- SQLite / MySQL (basic)

EDUCATION

Bachelor of Computer Application(BCA)

Shivaji University, Kolhapur,2025

Master of Computer Application(MCA)

SPPU Appearing

PROJECTS

E-COMMERCE APPLICATION (FLUTTER)

(2024)

Developed a mobile E-commerce application using Flutter and Dart, featuring product listing, search, categories, cart management, and user authentication. Implemented basic payment integration and order tracking functionality while designing a responsive and user-friendly interface. Focused on writing clean, modular code and ensuring smooth navigation and optimal app performance. Utilized SQLite/MySQL for data storage and management, demonstrating the ability to develop end-to-end mobile solutions.

PERSONAL EXPENSE TRACKER (PYTHON)

(2025)

Developed a fully functional Personal Expense Tracker application in Python to help users manage their finances effectively. The application allows users to add, edit, delete, and categorize expenses, as well as track income and generate monthly or yearly expense reports. Integrated data analysis and visualization using Python libraries like Pandas and Matplotlib, providing users with clear insights into spending patterns and budget trends. Implemented file handling to store user data securely and ensure persistence across sessions. Focused on creating a user-friendly command-line interface for ease of use, while writing clean and modular reusable code to support future scalability. This project demonstrated skills in Python programming, user data management, analytical thinking, problem-solving, demonstrating the ability to develop practical, real-world applications.

CHATBOT USING PYTHON

(2026)

Developed an intelligent chatbot application using Python to simulate human-like conversations and respond to user queries. Implemented Natural Language Processing (NLP) techniques such as text preprocessing, keyword detection, and pattern matching to provide accurate and relevant responses. The chatbot can handle FAQs, basic conversations, and context-based queries, making it interactive and user-friendly. Built with a modular architecture for easy maintenance and future enhancements, demonstrating skills in Python programming, string processing, and AI fundamentals.
